AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims

Claim 1 (currently amended): A semiconductor chip pick-up
method for picking up a semiconductor chip adhered to a sheet by
using a pick-up head, comprising:

a sheet exfoliating step for abutting a suction surface of a sheet exfoliation mechanism against a lower surface of the sheet and for performing vacuum-sucking through the suction surface thereby to exfoliate the sheet from the semiconductor chip; and a sucking and holding step of sucking and holding an upper surface of the semiconductor chip thus exfoliated from the sheet by the pick-up head thereby to pick up the semiconductor chip, wherein

in the sheet exfoliating step, when the vacuum-sucking is performed through the suction surface, the semiconductor chip adhered to the sheet is bent and deformed by a vacuum suction force in an almost same bent shape in a continuous bent range from an outer peripheral portion of one side of the chip to an outer peripheral portion of another one side of the chip thereby to exfoliate the sheet from a lower surface of the semiconductor chip.

- Claim 2 (original): A semiconductor chip pick-up method
- 2 according to claim 1, wherein the semiconductor chip bends and
- 3 deforms in a plurality of the bent ranges.
- Claim 3 (original): A semiconductor chip pick-up method
- 2 according to claim 1, wherein the semiconductor chip is
- 3 configured in a rectangular shape, and the bent range is set in a
- 4 direction which forms a predetermined angle with respect to one
- 5 side of the semiconductor chip.
- Claim 4 (original): A semiconductor chip pick-up method
- 2 according to claim 3, wherein the bent range includes a corner
- 3 portion of the semiconductor chip.
- 1 Claim 5 (original): A semiconductor chip pick-up apparatus
- 2 for picking up a semiconductor chip adhered to a sheet by using a
- 3 pick-up head, comprising:
- a holding table for holding the sheet; and
- a sheet exfoliation mechanism which is disposed beneath the
- 6 holding table, a suction surface of the sheet exfoliation
- 7 mechanism being abutted against a lower surface of the sheet to
- 8 perform vacuum sucking through the suction surface thereby to
- 9 exfoliate the sheet from the semiconductor chip,
- wherein the suction surface includes a plurality of suction
- 11 grooves and a boundary portion which partitions the adjacent
- 12 suction grooves, the boundary portion is abutted against the

lower surface of the sheet to support the sheet at a time of the vacuum sucking, and air is vacuum-sucked from the suction grooves to bend and deform the semiconductor chip adhered to the sheet together with the sheet thereby to exfoliate the sheet from a lower surface of the semiconductor chip due to the bend deformation.

Claim 6 (original): A semiconductor chip pick-up apparatus
according to claim 5, wherein the semiconductor chip is supported
by the plurality of boundary portions through the sheet.

claim 7 (original): A semiconductor chip pick-up apparatus
according to claim 5, wherein the semiconductor chip is
configured in a rectangular shape, and each of the suction
grooves is provided in a direction which forms a predetermined
angle with respect to one side of the rectangular-shaped
semiconductor chip.

Claim 8 (original): A semiconductor chip pick-up apparatus
according to claim 7, wherein the suction grooves are arranged in
a manner that corner portions of the semiconductor chip are not
positioned just above the boundary portions when the suction
surface is abutted against the lower surface of the sheet.

Claim 9 (original): A semiconductor chip pick-up apparatus
according to claim 5, wherein the suction grooves are provided at
a suction exfoliation tool, and the suction exfoliation tool is
attached to the sheet exfoliation mechanism so as to be exchanged
freely.

Claim 10 (original): A suction exfoliation tool for use in
semiconductor chip pick-up apparatus for picking up a
semiconductor chip adhered to a sheet by using a pick-up head,
comprising:

a suction exfoliation tool to be attached to a sheet exfoliation mechanism which has a suction surface being abutted against a lower surface of the sheet to perform vacuum sucking through the suction surface thereby to exfoliate the sheet from the semiconductor chip,

wherein the suction surface provided at the suction 10 exfoliation tool includes a plurality of suction grooves and a 11 boundary portion which partitions the adjacent suction grooves, 12 the boundary portion is abutted against the lower surface of the 13 sheet to support the sheet at a time of the vacuum sucking, and 14 air is vacuum-sucked from the suction grooves to bend and deform 15 the semiconductor chip adhered to the sheet together with the 16 sheet thereby to exfoliate the sheet from a lower surface of the 17 semiconductor chip due to the bend deformation. 18

- Claim 11 (currently amended): A semiconductor chip pick-up
 method for picking up a semiconductor chip adhered to a sheet by
 using a pick-up head, comprising the steps of:
- abutting a suction surface of a sheet exfoliation mechanism against a lower surface of the sheet;
- performing vacuum-sucking through the suction surface 6 thereby to exfoliate the sheet from the semiconductor chip, the 7 semiconductor chip adhered to the sheet being bent and deformed 8 by a vacuum suction force in an almost same bent shape in a 9 continuous bent range from an outer peripheral portion of one 10 side of the chip to an outer peripheral portion of another one 11 side of the chip thereby to exfoliate the sheet from a lower 12 surface of the semiconductor chip; and 13
- picking up the semiconductor chip by sucking and holding an upper surface of the semiconductor chip by the pick-up head.
